A question has been given in this question and a statement related to it. Read the passage carefully and review the statement based on it.

Using knives and canchas, two Russian astronauts on Tuesday took a sample of substance around a mysterious hole of the spacecraft called the Soyuz, which was erected at the International Space Station. A Moscow official suggested that this disorder could be deliberately done. This space station, standing on the ISS, was detected two months after the last visit of Soyuz, due to the presence of 2 mm in August, the air air leak was detected. Roscosmos, an astronomical institute, says that for the purpose of detecting this small but dangerous hole in the earth or in space, the binding of the insulation on the hole was taken and a sample of the substance around it was taken and replaced. A new insulation was applied. The chief of Roskosmos has said that the error of manufacturing has not been found in the investigation.

Experienced astronauts had to struggle but they managed to succeed in their mission. Before the spacewalk, astronauts were able to test the hole only from within the spacecraft. The most

important difficulty was that the Soyuz spacecraft was not designed to improve the space before the spacewalk, adverse to ISS, and no railing has been installed to catch the space passengers outside the vehicle.

Statement: The size of that mysterious hole was calculated as a large and destructive hole.

Select the most suitable option below.

A-statement is absolutely true.

B-Query is probably true.

C-statement can not be reviewed.

D-statement is completely false.

(A) **D - (Alternative 4)**

(B) B - (Alternative 2)

A question has been given in this question and a statement related to it. Read the passage carefully and review the statement based on it.

Using knives and canchas, two Russian astronauts on Tuesday took a sample of substance around a mysterious hole of the spacecraft called the Soyuz, which was erected at the International Space Station. A Moscow official suggested that this disorder could be deliberately done. This space station, standing on the ISS, was detected two months after the last visit of Soyuz, due to the presence of 2 mm in August, the air air leak was detected. Roscosmos, an astronomical institute, says that for the purpose of detecting this small but dangerous hole in the earth or in space, the binding of the insulation on the hole was taken and a sample of the substance around it was taken and replaced. A new insulation was applied. The chief of Roskosmos has said that the error of manufacturing has not been found in the investigation.

Experienced astronauts had to struggle but they managed to succeed in their mission. Before the spacewalk, astronauts were able to test the hole only from within the spacecraft. The most important difficulty was that the Soyuz spacecraft was not designed to improve the space during the spacewalk, in response to the ISS, and no railing has been installed to catch the space passengers outside the vehicle.

Statement: Astronauts succeeded in insulation around the hole but failed to collect samples for analysis.

Select the most suitable option below.

A-statement is absolutely true.

B-Query is probably true.

C-statement can not be reviewed.

D-statement is completely false.
